The Place and Movement Framework (PMF) Viewer

The development of the Eastern Transport Plan 2035 (ETP) is following a Vision-led approach, to move away from historic patterns of travel which has resulted in an overdependence in the private car. Whilst the ETP must seek to accommodate the growth proposed by the Councils, it must be delivered in a sustainable manner and in line with the Transport Strategy. Central to the Vision and as outlined in section 2.6 of the Eastern Transport Plan, nine Place and Movement Framework (PMF) categories have been applied to the ETP's transport network. The categories have been applied in order to capture the long-term aspiration for change across the network.

Each PMF category has a bespoke hierarchy of modes. In defining the Vision PMF for each part of the transport network, ETP is therefore committing to ensure that any changes made to the transport network within the Plan period align with the defined modal hierarchies. This ensures:

- Any transport schemes identified as part of this Transport Plan will align with the modal hierarchy defined for that part of the network through the relevant Vision PMF; and
- Any other changes to the transport network identified after the publication of this Transport Plan will be developed in accordance with the relevant Vision PMF.

The PMPMF Viewer is an interactive tools that provides users with access to PMF classifications, mapping, helping to inform transport planning, development proposals and streetscape design decisions.
